

Countertop Solutions

sample layouts

### A Pre-fitted System

Viola Park offers a set of countertop solutions designed to work in tandem with its base units to provide a refined, fitted result that is easy to configure and install for nearly all kitchen layouts. By ordering your countertops and cabinets together as a system, you gain the benefits of more refined design, streamlined project management and installation and in many cases, lower costs.

## Design Value

Good design is a result of the careful combination of deceptively simple decisions. The more steps and people there are in the process, the harder this is to achieve.

When you order countertops from Viola Park, those decisions are built into the system with each detail carefully considered as part of the whole kitchen's design. Everything arrives optimized for aesthetics and function, from the overall fit to the high tolerance machining and the relationship of the countertop to other components.

## Planning and Cost

By integrating the design and delivery of cabinets and countertops, you have consolidated two steps of the remodel process into one and eliminated a number of extra coordination steps during installation. While cost is dependant on your configuration, most high quality countertop solutions will fall between \$85-\$120 per square foot fully installed. Your Viola Park coordinator can assist in determining the cost and planning factors for you space but with a capable installer, costs for most Viola Park countertops, installed, should fall below \$80 per square foot.

### Unique Features

Viola Park Countertops solutions come pre-machined to include features like sink cutouts with integrated drainboards, backstops, backsplashes with integrated shelves, and supported overhangs for bar seating.

## Materials

Viola Park's selection of Paperstone, Corian and LG solid surface is based on their superior ability to wear gracefully over time and be renewed instead of replaced in the case of most damage. The color palette has been carefully selected to integrate with Viola Park's other colors and materials.

## Installation

Unlike outside sources who must template and fabricate after cabinetry installation, Viola Park countertops arrive with your order and can be installed in sequence with the other components. Openings for sinks and all exposed edges are carefully machined and sanded. Installation only requires trimming where counters meet architecture. These cuts do not need to be finished, as they are designed to be covered by backstop material, which will be included in your order. All seams are pre-machined and installation drawings are provided.
